Foundations Capstone Project

**Planning**

I will be creating a site where users can post pictures and information about their fly fishing endeavors in the state of Michigan. Users will be able to post photos and react to other users' posts. I am also planning to add a weather API so that fishermen can always be aware of local weather when they're heading out to fish.

**MVP 3 FEATURES**
1. Users can post the fish they caught
2. Users can "Like" or react to others posts
3. Use a weather API to obtain weather information
